

CAMPANULA GLOMERATA L., not previously collected in the state, was discovered in a young growth of *Populus balsamifera* L. on Highway 61, less than a mile from the Lakewood Road. The tall and coarse plants appeared startlingly strange, but a single flower in the fruiting specimens betrayed their natural affinities, thus aiding in field identification at least to the generic category. Coll. no. 5416 was made from the colony.

Duluth, Minnesota.

GERANIUM NERVOSUM.—Dr. L. R. Abrams of Stanford University has drawn attention to an error in our recent revision¹ of the perennial species of *Geranium* of the United States and Canada. Through a regrettable oversight we took up (on p. 22) the name *G. strigosius* St. John, although two earlier available names are plainly listed as synonyms in the accompanying bibliography of this species. Accordingly, it now becomes necessary to reinstate the name *G. nervosum* Rydb., and to relegate *G. strigosius* St. John (published originally as *G. strigosior*) to synonymy.—
G. NEVILLE JONES, University of Illinois.
